THE PROPOSED SCHOOL BUILDING PROGRAM
July 1, 1968 - June 30, 1974

Prepared for Public Hearings
To Be Held By Local School Boards

FOREWORD

School congestion and school plant obsolescence are no secrets to millions of New Yorkers living in many sections of our city. Nor are the diverse and adverse effects of chronic ethnic problems beyond general knowledge or understanding. Children, parents, teachers and taxpayers continue to face such consequences as short-time instruction, curtailed programs, racial imbalance, leased facilities, portable classrooms, spiraling costs, bigger budgets, and higher taxes.

In his prefatory message to the Board of Estimate and The Council which, on February 1, 1967, accompanied the proposed 1967-1968 Executive Capital Budget, the Honorable John V. Lindsay, Mayor, pointed up the fundamental truth that "A basic educational system of the first quality, measured in physical as well as instructional terms, is essential to the future of the citizens of this city".

A school's physical plant and instructional plan represent the warp and woof, the muscle and bone, of the educational process. Overcrowded and overaged buildings, outsized or undersized structures, outmoded and outworn schools, outdated equipment and overstretched facilities cannot accommodate a modern program of education any more successfully than a medieval catapult can launch a modern ballistic missile.

Despite significant strides forward made possible by unprecedented outlays of capital funds in recent years, some areas of the city continue to suffer the handicaps of a shortage of school accommodations, a dearth of satisfactory buildings, a scarcity of adequate play space and a lack of modern facilities and equipment.

The 1968-1974 School Building Program, submitted herewith for study by local school boards, incorporates a list of 231 major projects designed to expand the size, improve the quality, and, to the extent possible, balance the organization of the city's educational plant.

This first draft of the school building program for 1968-1974, prepared for public hearings on the local level, consists of two sections:

Part I - a list of the projects proposed for inclusion in the 1968-1969 Capital Budget, arranged in rank order of priority;

Part II - A list of the projects recommended for inclusion in the ensuing 5-year period. Projects in this section, referred to as the Capital Program for 1969-1974, have not been arranged in a rank order of priority.

The projects included in Part I, comprising the proposed school building program for the 12-month period extending from July 1, 1968 to June 30, 1969, are subdivided as follows:

45 projects recommended for construction

47 projects recommended for advance site acquisition or planning or both

35 projects recommended for advance site acquisition

In order to finance this program, the sum of $289,800,000.00 in new funds will be required, to be provided in the 1968-1969 Capital Budget as follows:

Surveys and Borings	$ 0.7 millions
Architectural and Engineering Costs	14.0
Site Acquisition	25.0
Modernization and Reconstruction	30.0
Portable Buildings for Temporary Use	1.0
Playgrounds and Athletic Fields	3.0
Completion of Projects Under Construction	10.0
Head Start-Early Childhood Centers	5.0
Air Pollution Control Equipment	2.0
New Construction (45 Projects)	199.1
Total	$289.8

The projects included in Part II comprise the building program for the five-year period beginning July 1, 1969. Part II lists 104 additional projects which when added to the 47 projects recommended for advance site acquisition or planning or both in 1968-1969, and the 35 projects limited to advance site acquisition in 1968-1969, represent the program and schedules for the acquisition of school sites, the preparation of plans and specifications, and the erection of school buildings to be undertaken between July 1, 1969 and June 30, 1974.

In accord with current policy on the preparation of capital budgets, projects estimated to cost less than $700,000.00 are not incorporated into the capital budget as line-items carrying specific appropriations. Funds required to finance such projects are included in the lump-sum appropriation for "Modernizations and Reconstructions" and the cost of each of these projects is charged against Code E-643 in the Capital Budget.

The 45 projects recommended for construction in 1968-1969, at an estimated cost of $199,100,000.00, include:

6 new High Schools and
12 Additions to existing high schools and conversion into comprehensive high schools;

12 new Intermediate Schools and
2 Additions to existing junior high schools and conversion into intermediate schools;

8 new Primary Schools and
1 Addition to an existing elementary school;

1 new Special School for special educational programs and services for emotionally and socially maladjusted children;

3 major renovations of existing school plant service facilities.

The completion of these 45 projects will result in a net gain in accommodations, after adjusting for buildings to be replaced and converted, of:

24,325 in the High School plant

20,883 in the Intermediate School plant

8,006 in the Primary School plant

The 47 projects recommended for advance site acquisition and planning in 1968-1969, with an estimated future construction cost of $229,300,000.00, include:

6 new High Schools;

21 new Intermediate Schools and
1 Addition to an existing junior high school and conversion into an intermediate school;

15 new Primary schools and
2 Additions to existing elementary schools;

2 new Special Schools for special educational programs and services for emotionally and socially maladjusted children.

The completion of these 47 projects will result in a net gain in accommodations, after adjusting for buildings to be replaced and converted, of:

17,912 in the High School plant

38,600 in the Intermediate School plant

7,483 in the Primary School plant

The 35 projects recommended for site acquisition only, in 1968-1969, with an estimated future construction cost of $176,400,000.00, include:

5 new High Schools;

14 new Intermediate Schools;

15 new Primary Schools;

1 Special School for special educational programs and services for emotionally and socially maladjusted children.

The completion of these 35 projects will result in a net gain in accommodations, after adjusting for buildings to be replaced and converted, of:

20,000 in the High School plant

21,634 in the Intermediate School plant

1,177 in the Primary School plant

The 104 projects recommended for inclusion in the Capital Program for 1969-1974, to be constructed at an estimated cost of $336,500,000.00, include:

4 new High Schools;

17 new Intermediate Schools;

56 new Primary Schools, and
1 Addition to an existing elementary school;

10 new Special Schools for special educational programs and services for emotionally and socially maladjusted children;

14 major renovations of existing school plant service facilities;

1 Addition to an Elementary School and conversion into an Intermediate School;

1 replacement for an Occupational Training Center currently housed in an obsolete converted elementary school building.

The completion of these 104 projects will result in a net gain in accommodations, after adjusting for buildings to be replaced and converted, of:

12,628 in the High School plant

22,829 in the Intermediate School plant

The elementary school plant will be upgraded but not enlarged by projects included in the 1969-1974 Capital Program.

The proposed school building program incorporates categories of schools and groups of related projects designed to implement Board plans and policies on the:

1. elimination of all remaining obsolete buildings which are wholly or partially of "C"-type construction (see Page X),
2. establishment of 4-year, coeducational, comprehensive high schools,
3. development of Educational Parks,
4. erection of neighborhood Head Start-Early Childhood Centers,
5. construction of schools under the provisions of the New York City Educational Construction Fund,
6. implementation of the Speno-McCloskey Amendment as it pertains to the education of maladjusted or retarded pupils.

The continually changing educational process, stemming from ever-changing philosophies, curriculums, methodologies, problems and responsibilities, must, in time, result in a misalignment between facilities built into the schools' physical plant and the necessary means or resources for accommodating a modern program of education. Obsolete school buildings which cannot be modernized satisfactorily at reasonable cost must eventually be replaced. The proposed building program provides for the replacement of 129 educationally obsolete buildings of which number 101 are elementary schools, 9 are junior high schools, 8 are high schools, and 11 are schools for maladjusted or retarded pupils. Included in this group of educationally obsolete schools are 24 buildings which are also structurally obsolete -- 14 of "C"-type construction and 10 of "AC"-type construction.

Existing high school buildings generally lack the capacity for a 4-year high school enrollment and the facilities for a comprehensive high school curriculum. In order to meet these two crucial needs, it is proposed to supplement the new high school construction program with a program of expansion of existing high schools. Over and above the 17 new high schools for which funds are requested for construction or planning or site acquisition, 12 Additions to existing high school buildings have been included in the proposed building program in the category of projects for which construction funds will be requested for 1968-1969. When examined against the backdrop of requirements for a comprehensive secondary school curriculum, these 12 buildings must be viewed as "incomplete" and therefore inadequate structures because they lack the essential facilities for industrial arts or semi-skilled occupational programs. In the face of the pressing need for additional high school capacity, it is not possible to install these urgently needed facilities in the existing structures without seriously reducing the number of available classrooms.

The proposed building program includes a request for $28,400,000.00 for the completion of 5 schools to be constructed as components of the Northeast Bronx Educational Park in the Co-op City area; namely, North Bronx High School (capacity - 4,000); I.S. 180 (capacity - 1800); I.S. 181 (capacity - 1800); P-153 (capacity - 1400); and P-178 (capacity - 1400). The construction of this Educational Park is an integral part of an overall program designed to advance the program for quality integrated education in the city's schools. An appropriation of $2,550,000.00 for preliminary work on the development of this facility was included in the 1967-1968 Capital Budget.

The urgent need to raise, improve, develop and enrich the educational background and accomplishment of children in disadvantaged areas is recognized by a recommendation in the proposed building program which will double the pace of construction of Head Start-Early Childhood Centers. In order to meet this goal, the sum of $5,000,000.00 (compared with $2,500,000.00 in the 1967-1968 Capital Budget) is requested for the construction of roughly 20 additional centers in 1968-1969, to provide for the education of approximately 5,000-6,000 pre-school children.

The New York Legislature on June 1, 1966, enacted an amendment to the Education Law by adopting new Article X establishing the New York City Educational Construction Fund as a public benefit corporation to provide for the construction of school buildings in combination with other compatible structures subject to the approval of each project by the Board of Education and specified city authorities. Within the scope of this enabling legislation, it is expected that every new school project incorporated into the 1968-1974 Building Program may well be the subject of a joint study by the Board of Education, the New York City Educational Construction Fund, and appropriate city agencies, as it relates to land acquisition, planning and construction, and capital financing.

The implementation of the Speno-McCloskey Amendment to the New York State Education Law with respect to the education and training of special groups of children will be advanced by 3 categories of provisions in the 1968-1974 Building Program:

1. The inclusion of 14 new school buildings especially planned for the education of emotionally disturbed, socially maladjusted, and mentally retarded children. These new buildings, to provide facilities for roughly 3,500 children, will be constructed at an estimated cost of $28.5 million, exclusive of site costs.

2. The renovation and modernization of selected school buildings as they become available through schedules for the replacement, conversion or consolidation of existing schools, and the reconstruction of sections of operating elementary and junior high or intermediate schools. The cost of renovating buildings or classrooms to accommodate special programs for emotionally disturbed, socially maladjusted, and mentally retarded children can, in most instances, be charged to Code E-643 in the capital budget, a lump-sum appropriation for "Modernizations and Reconstructions".

3. The incorporation into the plans and specifications for new schools of such special spaces, features and facilities as junior guidance rooms, special guidance rooms, testing rooms for counselors and clinicians, etc., required for the early-identification program and other programs designed for groups of disturbed or retarded children. The cost of these requirements is included in the total cost of construction of each new school building.

May 1, 1967

Director, Program and Research

CLARIFICATION OF TERMS USED IN THE SCHOOL BUILDING PROGRAM

Sections of the adopted school building program make reference to a number of special terms which should be clearly understood in order to interpret the program correctly. These items are defined as follows:

Continuing Funds: These are lump-sum appropriations for various activities related to the building program which are prerequisite to the construction of school buildings, e.g., surveys and borings, preparation of plans and specifications, and site acquisitions (Codes E-1, E-279 and E-640, respectively). In addition, school plant modernizations, reconstructions and renovations and the development of playgrounds and athletic fields may also be charged against appropriate lump-sum appropriations; namely, Codes E-643 and E-683. Funds required for the relocation and erection of portable classroom units for temporary use are provided under Code E-1259. Funds required for the construction of neighborhood Head Start-Early Childhood Centers are provided under Code E-1418.

Construction Projects for 1968-1969: Under this heading are included specific projects proposed for construction in the 12-month period beginning July 1, 1968. The building of these projects, it must be noted, cannot be undertaken until adequate appropriations for construction are provided in the 1968-1969 Capital Budget.

Completion of Projects Under Construction: These new funds are requested for the purchase of furniture and equipment for new schools to be completed prior to June 30, 1968, and, where required, for the completion of school buildings for which construction funds were provided in previous capital budgets.

Advance Planning (a): This category includes projects for which budgetary funds are requested in 1968-1969 for advance planning or site acquisition or both. Whenever possible, so-called "a" projects are recommended for construction in the following year. Capital budget funds required for site acquisition are made available under Code E-640; funds required for the preparation of plans and specifications are made available under Code E-279. Information on the status of projects in the 1967-1968 Capital Budget is given in Column 7 of the Building Program.

Advance Site Acquisition (b): This category includes projects for which budgetary funds are limited to site acquisition only. Whenever possible, so-called "b" projects are recommended for advance planning status ("a" status) in the following year. Capital budget funds required for the acquisition of sites for school projects are made available under Code E-640. Information on the status of projects in the 1967-1968 Capital Budget is given in Column 7 of the Building Program.

Priority Number: The rank order of priority assigned to each project recommended for construction or planning or site acquisition in 1968-1969, reflects in large measure the order of the steps which must be taken to modify the present 6-3-3 plan of organization. The listing of projects in the capital program for 1969-1974, is primarily for the purpose of identification and reference and is not intended to establish a relative order of need for future school building programs. High school projects to relieve current overcrowding and provide facilities for an expanded ninth year, and intermediate school projects to provide accommodations for grades currently housed in elementary school buildings, in general, have been assigned high orders of priority. Also to be advanced as rapidly as possible are replacements for "C"-type structures; new schools for special educational programs and services for socially and emotionally maladjusted pupils; and renovations of electrical and sanitary service facilities in existing high school and middle school plants.

1968-1969 Capital Budget: Proposed capital budgets are prepared by the City Planning Commission first, for public hearing and second, for submittal to the Mayor. The Executive Capital Budget prepared by the Mayor is then submitted to the Board of Estimate and the City Council for consideration. The final Capital Budget is adopted after the Board of Estimate and City Council hold public hearings. The Planning Commission, Mayor, Board of Estimate and City Council have the authority to modify the recommendations submitted by the Board of Education.

The school building program to be adopted by the Board of Education will be submitted to the Planning Commission on or before September 30, 1967. The adopted school building program will serve as a basis for the preparation, by the Planning Commission, of the proposed 1968-1969 Capital Budget for school construction.

Location of School Projects: School sites which had been selected by the Board of Education after referral to the Local School Boards, and which, subsequently, were approved by the Site Selection Board of the City of New York and authorized for acquisition are identified in Column 3 of the building program by their precise location. Sites which have been proposed by Local School Boards or other agencies of the Board of Education or city government, which are under study but which have not as yet been selected, approved and authorized, are described in terms of a "General Vicinity" indicated in Column 3. The locations of some proposed new intermediate schools are tentatively specified with reference to the Intermediate School Planning Area to be serviced by the new school. The delineation of each Intermediate School Planning Area with respect to its community components is given on Page 27-Page 43. The location of a proposed replacement for an obsolete elementary school is tentatively specified with reference to the location of the obsolete building to be replaced. Column 3 is not necessarily intended to pinpoint or circumscribe the actual location of a new school which, ultimately, might be selected in the same or in another general area depending on special circumstances which might prevail in any given instance.

Capacity of School Projects: The proposed capacity of a project listed in the building program is subject to change to conform to future conditions as they may arise. Necessary changes in capacities will be reflected at a later date in programs of requirements for new schools which are approved lists of spaces, features, and facilities to be incorporated by the architect into the plans and specifications for new school buildings. The capacity indicated, it should be noted, is a "functional capacity" based on the kind and number of classes to be organized, with special consideration given to class size, special activities and services.

Purpose of Project: Included in this column (Column 6) for proposed intermediate schools, is information on Local School Board Districts to be serviced by the new school. Since intermediate school planning areas, communities, and local school board districts are not necessarily coterminous and have not, for a variety of reasons, been adjusted to have common boundaries or limits, it is not possible to equate them exactly. In cases involving only small portions of communities or only a small number of schools, corresponding local school board districts have been omitted from Column 6. However, all local school boards actually involved in the development of a plan of organization for a new intermediate school will be consulted at the appropriate time on the location of the new project.

Type of Structure: Information on obsolete schools to be replaced given in Column 6, includes the year of construction, the year of expansion, and the type of structure; namely, type "A", "C", etc. These types may be defined as follows:

A - refers to buildings of incombustible materials throughout.
B - refers to buildings having walls and structural members of incombustible materials.
C - refers to buildings having exterior walls of masonry with interior framing above the first floor of wood or unprotected iron or steel.
AC etc., - refers to buildings of more than one type of construction. In this instance (AC), a part of the building is of A construction; the remainder is of C construction.

INTERMEDIATE SCHOOL PLANNING AREAS

Intermediate schools will be located in areas where, within the limitations imposed by the ethnic composition of neighboring communities, the number of children to be served, and the availability of transportation facilities, a maximum degree of racial balance in each school's organization can be realized. Sites for intermediate schools and the organization of intermediate schools will be studied jointly by District Superintendents, Local School Boards, the Central Zoning Unit, the Office of Integration, and the School Planning and Research Division.

In order to ascertain the need for intermediate school projects and prepare a basis for the future determination of their precise location and student organization, a series of 17 "Intermediate School Planning Areas" was delineated by the Programming Section -- each planning area encompassing a complex of neighboring communities. The size of the projected enrollment in each Intermediate School Planning Area was compared with the number of suitable accomodations available in the planning area and the gap between the projected enrollment and available accommodations was "filled" by an appropriate number of new intermediate school projects which have been incorporated into the 1968-1974 School Building Program. To the extent that Intermediate School Planning Areas cut across the lines of ethnically homogeneous communities, it should be possible to plan for the greatest possible degree of racial balance in the new schools.

Data on Intermediate School Planning Areas are presented in the Appendix, Page 27 to Page 43. It should be noted, first, that the areas which have been delineated are preliminary and tentative and are subject to future revision, if necessary, and second, that it may be possible to provide intermediate school capacity in certain instances by the conversion of suitable elementary school and high school structures.
